This is the key macro program for the HP series 9800-B and 9800-C desktop calculators. The program allows you to enter the keystroke macros in a special calculator version of the Notepad+ text editor. The program supports multiple emulation of the keyboards, memory devices, and printers. The program also supports the communication with additional terminals and programs (drivers) through RS232C and Paralel port, as well as serial port emulation using the Modem emulation. Terms used in the program: ABCLOCK The keyboard function used to lock the emulated calculator, usually the password. ALTSTOP The numeric keypad function used to stop the program (usually the number 1). CAC The calculator accumulator (usually the sum of all entered numbers). CC Used to toggle the change of the calculator page (usually the function of the number keys). COM0 The serial port, usually the emulated RS232C port. CSTOP Used to enter the space function (usually the number 4). PRINTER Used to print the entered data. QUIT Used to exit the program. SECSE The stop function used to stop the emulated calculator and turn on the calculator. SETACT Used to change the program and the data being displayed. SETACC Used to set the accumulator value. SETCOM Used to set the serial communication (usually the modem). SETCSTOP Used to set the functions used to control the change of the calculator page. SETEQ Used to set the functions used to enter text data. SETMAC Used to set the functions used to enter Mac OS text data. SETFON Used to set the function used to change the current display to be displayed. SETFRA Used to set the function used to change the display orientation. SETPAG Used to set the function used to change the calculator page. SETPRN Used to set the function used to print the entered data. SETPOKE Used to set the function used to enter text data. SETPP Used to set the function used to enter the data to be displayed. SETSTAT Used to set the function used to select the state of the emulated calculator. SETQ Used to set the function used to enter the key to change the calculator page. SETR Used to set the function used to display the result. SETS Used to set the

Function used to change the state of the emulator. S <https://theinaas.ning.com/photo/albums/6344257/Album:167226>
