Autodesk Autodesk used to develop software for the graphic industry. Before 1992, its products included AutoCAD, AutoCAD LT, VectorWorks and Trelby CADDigital. Autodesk was acquired by Corel and then by Corel's subsequent acquisition of the CAD division, Corel Graphics. In 2002, Autodesk spun off CAD into an independent company called Autodesk Inc. In 2012, Autodesk spun off its entertainment software business and called it the "Autodesk Entertainment Group". In June 2014, Autodesk spun off its AutoCAD Graphics business, its VectorWorks product line and its newly acquired Trelby product line into its own company called Autodesk, Inc. Revit

Automated design AutoCAD supports automatic 2D or 3D drawing generation through finite element or finite element analysis methods. AutoCAD can also generate a 2D drawing from a 3D model using 2D flow simulation. Material texture generation AutoCAD includes a Material Editor that enables generation of texture maps for model and surface creation. In addition to applying texture maps, other drawing parameters can be applied to the material, including surface color. Materials and surfaces can be updated in an Autodesk Exchange App. Road functions Autodesk Architecture, Civil 3D and Mechanical 3D were formerly known as RoadWorks. AutoCAD Roadworks was initially

---

released as a separate product, followed by the development of the AutoCAD RoadPack for the design of roads, streets and freeways. RoadWorks is built with the same underlying technology as AutoCAD Architecture and Civil 3D, but it was developed by a separate team and initially released for use in the early years of AutoCAD in 1997. Autodesk recently acquired the road design software company from PTC and integrated it into AutoCAD Architecture, Civil 3D and Mechanical 3D. The Autodesk RoadPack for AutoCAD was a standalone product and only available as a part of the AutoCAD subscription in the same bundle as AutoCAD Architectural. The new RoadPack functionality was added to

the Autodesk Roadworks Product. It was previously a paid add-on for AutoCAD Architecture, Civil 3D and Mechanical 3D. RoadWorks has had few updates since it was acquired by Autodesk. The last update was released in 2010, and RoadWorks lacked Autodesk Exchange App support. Software development AutoLISP AutoLISP is an extension language, which allows developers to write customized code, which runs on AutoCAD. It was also the foundation of AutoLISP, a prototype scripting language for design and programming. AutoLISP language is heavily tied to AutoLISP compilers. AutoLISP language was started as part of project for AutoLISP compiler. AutoLISP is the only AutoCAD

language that was able to use new technology C++, which was introduced in AutoLISP 5. AutoLISP Language Compiler (ALLC) is a compiler, which has been developed for more than 5 years now. ALC a1d647c40b
