has many basic functions that perform drawing and data entry in AutoCAD, including the ability to find locations, create drawings, run report, create drawings, do line and polygon drawing, plot a map, and access the Autodesk Exchange Apps. Many of these functions can be programmed with AutoCAD's Visual LISP or AutoLISP, a programming language based on the Visual Basic language. Visual LISP uses the FCL library (Function Call Library), which is a library to provide functions such as drawing functions, and specialized drawing functions. Visual LISP (like Visual Basic) is an interpreted language, which means that the entire program is first interpreted to be run before being executed. Visual LISP may also be used to write macros for AutoCAD. AutoLISP is similar to Visual LISP, but the language is compiled. The FCL is not needed to use AutoLISP. Macros are short instructions that can be used to automate many operations in AutoCAD. AutoCAD's main method of obtaining access to external software is through its own API, as its library allows plugins to be built for it, but most third-party software packages simply implement their own API which provides similar access. Aspects AutoCAD has many "aspects", or areas of customization. These include: Document setup – Changes or manipulates the drawing and drawing history aspects of AutoCAD Plotting – Changes or manipulates the plotting area and plotting aspect of AutoCAD Plotting programs – Changes or manipulates the plotting programs of AutoCAD Rasters – Changes or manipulates the rasterizing aspect of AutoCAD Text – Changes or manipulates the text aspect of AutoCAD Web – Changes or manipulates the Web publishing aspect of AutoCAD Windows and Macintosh AutoCAD currently supports both the Windows and Macintosh operating systems. Web AutoCAD Web provides an "Internet Engineering Team" (IET) Web-based "show case" (for marketing purposes) for AutoCAD. The primary feature is the ability to make Web page or application links with a single click. This functionality allows users to link directly from a Web page to a drawing, plot, or drawing element from within AutoCAD. It also allows users to execute commands and scripts. AutoCAD Web also provides a Web-based API for AutoCAD. Drawing processes a1d647c40b

## What's New in the?

AutoCAD now supports in-context markup interactively. Markup Assist is now used with all draft drawings. Annotation: Drawing properties are now added to annotations in a tooltip so you can see them at a glance. Annotation properties are now listed with their values in the tooltip. Three new standard annotations: Help, Classification, and Tag. Two new common annotations: Abbreviation and Alternate Geometric Dimension. You can now export annotation properties as XML files. (video: 1:15 min.) You can now delete any annotation by clicking on the delete button or by right-clicking on it and selecting Delete. Extended Dimensions: Adjust a dimension (the width, height, or depth of a profile) to create an exact-fit dimension, standard dimension, or variant dimension. You can also enter a non-standard dimension with an exact-fit dimension, standard dimension, or variant dimension. Changeable data is added to the dimension element in the Properties window to make it more intuitive. You can now set up a dimension category. You can choose from: Component Dimension, Construction Dimension, Drawing Dimension, Mechanical Dimension, Quantity Dimension, Unit Dimension, and Unit Dimension. You can now specify subcategories of each dimension category in the Properties window. You can now control whether a dimension is edited in the 3D model or in the 2D model. 3D Modeling: You can now place hatch and sketch fills in the 3D model. You can now place sketch fills and hatch fills from the 2D model into the 3D model. You can place individual lines from the 2D model into the 3D model. You can now select lines or edges and automatically place them into the 3D model. You can automatically add several-sided angled faces to a model. You can also place objects, such as angles, circles, or ellipses, into the 3D model. You can now specify an easy snap distance for all components. You can also use the default distance, or you can use a specific distance. You can now define easily placeable objects in the drawing environment. You can add text to an object, then easily place it at any position. You can place objects to any location
