My factory looks like this: `app.factory("CountTo", function () { return { countTo: 3 }; });` and my controller looks like this: `app.controller("countToController", ["$scope", "CountTo", function($scope, CountTo) { $scope.countDown = function() { console.log(CountTo.countTo); } });` and my HTML: `{{ countTo.countTo }}` When I `console.log CountTo.countTo`, it returns undefined in the console. I'm very confused at this moment. Any help will be highly appreciated. A: It should be

The role of hydrogen peroxide in mucosal defense was examined by measuring influxes of  $^{45}\text{Ca}$ ,  $^{86}\text{Rb}$ , and  $^{22}\text{Na}$  in human gastric mucosa. Inhibition by  $\text{H}_2\text{O}_2$  of  $^{45}\text{Ca}$  influx was greater than that of  $^{86}\text{Rb}$  influx but was of the same order of magnitude of  $^{22}\text{Na}$  influx. Influxes of all three ions were abolished by 1 mM aminoglycoside antibiotics, indicating that  $\text{H}_2\text{O}_2$  acts at the level of anion or anion/cation exchange. Inhibition was restored by the addition of glutathione. Reduction of  $\text{H}_2\text{O}_2$  to  $\text{H}_2\text{O}$  by catalase or addition of ascorbate to mucosal medium prevented inhibition of  $^{22}\text{Na}$  and  $^{45}\text{Ca}$  influx, but not that of  $^{86}\text{Rb}$  influx. Exposure of the mucosa to tert-butyl hydroperoxide or to 200 mM HCl stimulated  $^{45}\text{Ca}$  and  $^{22}\text{Na}$  influx by 30-100% and, at the higher levels of stimulation, reversed inhibition of  $^{87}\text{Rb}$  influx by  $\text{H}_2\text{O}_2$ . Results indicate that  $\text{H}_2\text{O}_2$  may modulate epithelial ion transport.Home > Newborn: 5 to 6 Month Pictures This is an archive of a now- 55cdc1ed1c
